

The system was developed using PHP,HTML,CSS and JAVASCRIPT I used MDB bootstrap library for the graphs and excelReader, exceSpreadsheet libraries to extract data from a excel fie into a database, the system has one user. The user will enter the customers information then after the pressing the submit button the web site will lead him to a page where he/she would be required to upload the excel file, after uploading the fie the system will automatically retrieve data from the data base where the excel file matches the customer ID then populate a expense table and the graph.

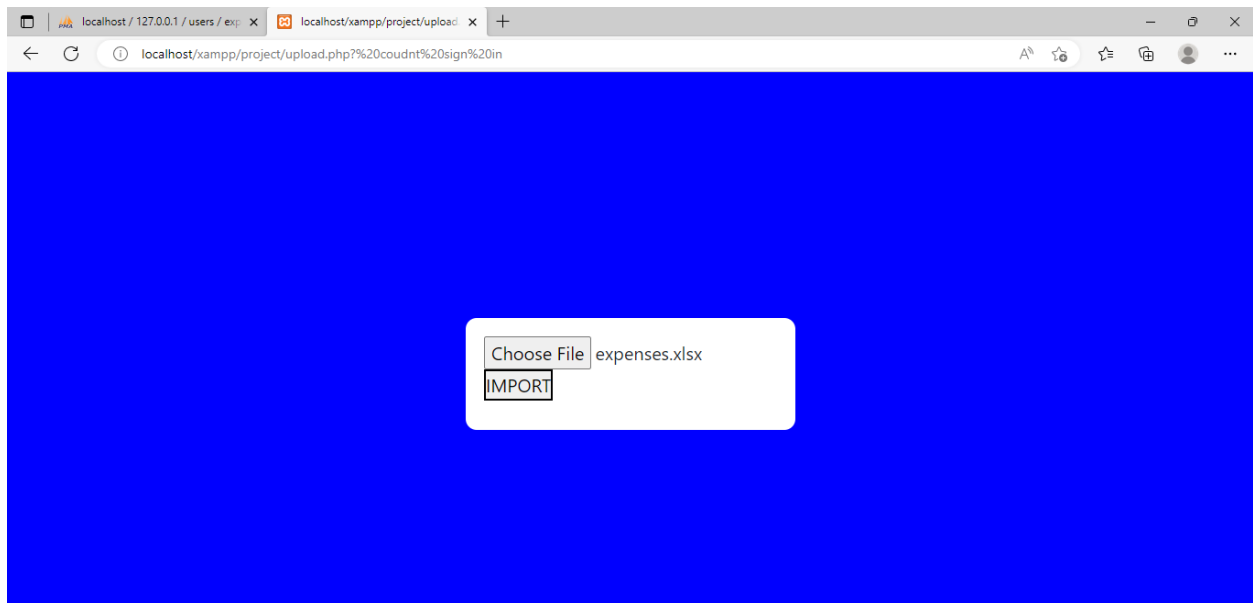

System images

Home page the user will enter customer details then press the submit button

The system will automatically redirect you to the upload page. Excel file only

The press IMPORT button.
